DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Applicant is required to clarify what is intended by "the tire-based unit only response to unmasked initiation signals".

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Juzswik et al. (US 6,612,165).

Regarding claim 1, Juzswik et al. disclose a tire parameter sensing system (10) for a vehicle (12) having a plurality of tires (14), the system comprising:

a plurality of tire-based parameter sensing units (18), each tire-based unit having an associated and being configured to receive initiation signals and, response thereto, to transmit response signals (figure 1);

a vehicle-based unit (16) for receiving response signals from the tire-based units and for transmitting the initiation signals the tire-based units (col. 3, line 8 through col. 4, line 19); and

a plurality of signal masking devices (44) coupled the vehicle-based unit, each of the signal masking devices having an associated tire location in which a tire-based unit being actuatable for masking the initiation signals near its associated tire location, the tire-based units located (col. 4, lines 20-30),

the vehicle-based unit controlling the signal masking devices so as to control the associated tire location from which a tire-based unit responds to the initiation signals (col. 5, lines 4-44).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ghabra et al. (US 6,838,985) disclose a system for remote tire pressure monitoring using initiation signal to actuate a tire-based unit.

Ernst (US 5,808,190) disclose a system for locating wheel position.
